

Coosa Valley Electric Cooperative launches world- class broadband

*Coosa Valley Technologies is
bringing faster internet and better
service to its members*

In today's world, a high-speed internet connection is crucial for every growing community. It speeds communication, jump-starts businesses and accelerates education. Now, after an overwhelmingly positive vote by the members of Coosa Valley Electric Cooperative, we are proud to announce the launch of Coosa Valley Technologies to close the digital divide in our area.

The new broadband project launched in September last year, and construction has already begun on Phase 1 of our fiber build-out. Once completed later this fall, Coosa Valley Technologies will continue to expand throughout our service area, starting with areas currently underserved or that lack access to high-speed internet.

While internet service is a new offering for CVEC, the cooperative is no stranger to providing crucial services that are both reliable and affordable. A fiber optic network has the potential to create tremendous growth for our community, and CVEC General Manager Leland Fuller is excited to see how it will help the area reach its full potential.

"Our first priority has always been a commitment to excellence in providing reliable consumer service," he says. "In keeping with this priority, the launch of our broadband internet will improve the quality of life for our member-owners, empower local businesses and contribute to the vitality and growth of our communities."

The new fiber network will improve even further on the quality electric service CVEC members expect by reducing outage times and laying the foundation to take advantage of cutting-edge technology in the future. In addition, internet speeds up to 1 Gbps will provide members improved access to telehealth, online education opportunities and their favorite streaming services.

Furthermore, high-speed internet service will ensure our community can keep pace in today's world without being held back

by outdated technology or poor reliability. It will give our local business owners the tools they need to compete and thrive in the modern marketplace while letting existing businesses know the Coosa Valley area is a great place to call home.

CVEC changed our community forever when we began offering electric service more than 80 years ago. Now, Coosa Valley Technologies has the potential to transform our area even more by offering the fastest and most reliable internet technology available. Visit CoosaValleyTech.com to find out when fiber service will be available in your area and learn more about how next-generation internet speeds can transform your life. ■
